

Quick Oil System

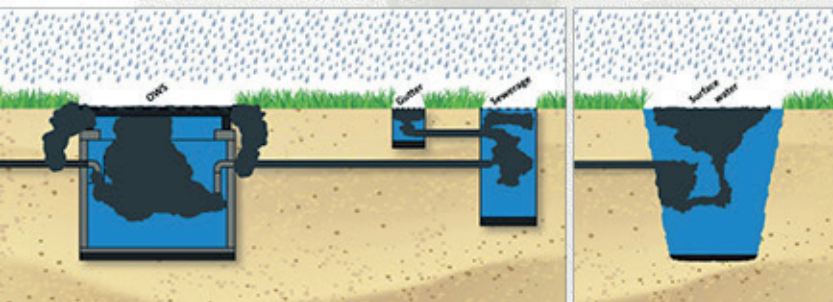

From waste to fuel

Innovative solution

The Quick Oil System takes away the need to annually empty and clean your Oil Water Separator (OWS).

Our innovative solution reduces the risk of damages and pollution caused by drift-punch to a minimum.

The Quick Oil System (QOS) stores the residual (oil and petrol) from the OWS separately in the reservoir.

Double advantage

The valuable residual can be sold and your OWS stays clean.

User-friendly

The QOS can be attached to any new or existing OWS and the installation is quick and easy. Moreover, you can check the status of the QOS and OWS and you can control the QOS at any time, using the custom made mobile application and e-mail services.

Systems For All

Quick Oil System

Remotely tracking the process

The control panel of the QOS allows you to remotely check the status of the QOS and OWS and also operate the QOS.

Changes are recognized immediately, which allows the user to immediately signal and solve any disturbance/malfunction.

Using the mobile application provides an up-to-date report of the QOS and OWS. In case of any disturbance/malfunction you will receive an instant message by text message or email.

Operating energy-neutral

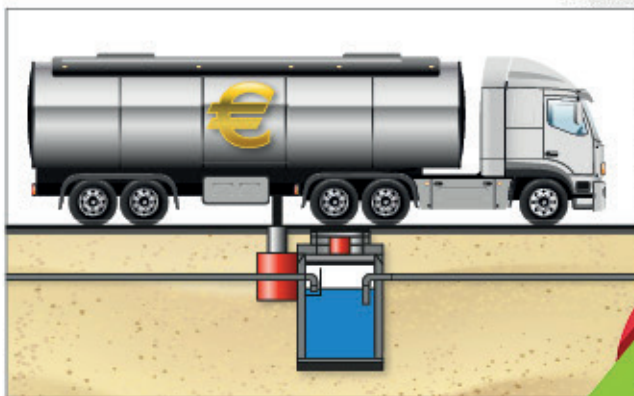

We can also deliver a special energy-neutral design, in which a solar panel provides the energy for the control panel. This design is completely self-sufficient and energy-neutral. Our energy-neutral design helps you meeting your CSR-targets.

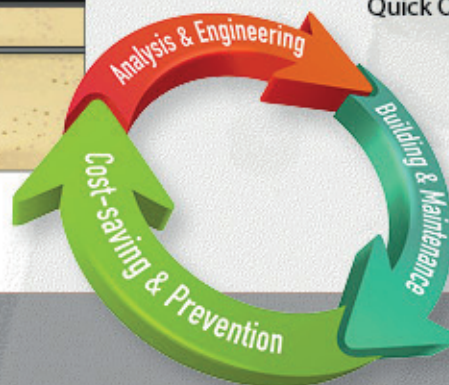

Quick Oil System; sustainable solution

Traditional OWS
High costs
Waste
